Introduced in 1982, AutoCAD Activation Code was a first in the world of CAD. It was a commercial product that worked on a desktop graphics terminal, with graphic images displayed on the screen. In the beginning, this was only possible with a graphics adapter card in a computer, for example in the form of an nVidia RIVA 128 Graphics card. In the beginning, AutoCAD was just a simple 1D drafting program with no features, but it was not difficult to imagine the application to do a 2D drafting and a 3D modeling. Autodesk delivered this software with the promise of continuing software development. In the beginning the program was just a manual and customers were a bit scared by its price. As more features were added and the program became more powerful, AutoCAD started to be used for a variety of applications in the mechanical, architectural and engineering fields. AutoCAD in the mid 1990s, AutoCAD's graphic user interface (GUI) was designed to be easy to learn and use. At that time, it was the only CAD software application with an easy graphical user interface that allowed users to interact with the software without using the command line of a mainframe computer. It was the first CAD application that was so easy to learn and use that it could be easily taught by non-programmers to designers and architects. This made AutoCAD the best-selling CAD software, and it was the only CAD product with a growing market share for several years. In the beginning, CAD was only used by professionals. After the introduction of AutoCAD, the application rapidly gained acceptance in the business world and became the market leader in the field of drafting and CAD. With the development of Internet technology and the hardware capability of microprocessors, the AutoCAD program is now also available on mobile devices, such as tablets and smartphones, as a mobile CAD application. With the development of web applications, the Internet has become a medium for communication and collaboration, and it is now possible for users to work together on their design projects anywhere in the world. AutoCAD benefits and features The most important benefits of using AutoCAD are: • Most important is the fact that it's easy to learn and use.
