Windows (X64-bit) ESRI Shapefile (.shp) Base layer (.dbf) Complete source code (.cse) Ad-freeQ: How to make a button move to an absolute position in Javascript/HTML? I'm currently messing around with HTML and JavaScript and want to move a button to a more specific position in the page. So far, I've tried setting its coordinates to the absolute position of the target button, but the button's position is permanently fixed to the center of the page. What could I be doing wrong? Here's the code for the moving button: `function move() { var text = document.getElementById('text'); text.style.top = '60px'; text.style.left = '40px'; text.style.font = '45px Arial'; var button = document.getElementById('button'); button.style.top = '50px'; button.style.left = '30px'; }` Here's the button in its current position: Here's the button after moving it to the center of the window: A: There are so many syntax errors that I don't even know where to start. Here is a version of your code that is pretty close. There are some other items that may cause a few issues that you might want to figure out: Generally, elements cannot be styled like this because it is not CSS, it is CSS-like-properties. In fact, you will likely want to just stick with CSS if you are going to continue with this. Put all of your HTML in the HTML and not in your JavaScript. JavaScript is for manipulating the DOM, not the HTML. Put all of your HTML on one line and use one quote per line. It will help with your indentation. Lets start with a skeleton for your HTML:

System Requirements For SaviDraw:

At a Glance: It took a lot for me to not buy this game even though it's free. I don't know what it is, but I like well-designed games that get to be free. I guess it's why I still play Baldur's Gate I & II and Path of Exile despite paying to play them. The only game that I can think of that got even close to The Path of Exile was Bioshock: Infinite. Path of Exile wants to be Bioshock: Infinite. It wants to create a Dark Souls experience.
