Soon Mad Max 2: The Road Warrior was unleashed Soon Mad Max 2: The Road Warrior was unleashed Soon Mad Max 2: The Road Warrior was unleashed. (c) Twenty-First Century Films Ever wondered what it would be like to arrive in an empty city, having just dropped a nuclear bomb? Mad Max 2: The Road Warrior (1981) tries to figure out that question. In a post-apocalyptic landscape of crushed cars, broken buildings, and starving people, Max (Mel Gibson) is on the run with a variety of bounty hunters. The set-piece scene in Mad Max 2: The Road Warrior is a brilliant piece of action filmmaking. Ironically, a fifth of the movie is dedicated to the beautifully choreographed car chase. Driving through an empty desert, the film features several unforgettable passages, including: The scene where Max and his car team drive past a wrecked gas station, attempting to get a bit of gas (now that fuel is the most valuable commodity in the wasteland). Here, the camera stays static for a long time, staring into the distance, as the music builds to a crescendo: And finally, here's the scene that has been endlessly discussed in the comments sections of my previous articles: A hazy image is inserted into the shot, and then replaced with a close-up of Max's face

For example, an IMD can be used to treat cardiac conditions in which a physician can deliver electrical stimulation signals (e.g., via electrodes) to the patient's heart to treat arrhythmias such as atrial fibrillation (AF), atrial flutter (AFL), atrial tachycardia (AT), ventricular fibrillation (VF), or ventricular tachycardia (VT). Other cardiac conditions can be treated with electrodes implanted or attached to the surface of the heart. For example, an IMD can deliver electrical stimulation to the patient's brain via one or more electrodes to treat movement disorders. Still other medical conditions may be treated by delivering electrical stimulation to a patient's nerves or muscles. For example, an IMD can provide electrical stimulation to a patient's nerves or muscles for purposes of restoring coordination and control of muscles or for purposes of weaning the patient off of a ventilator. Typically, an IMD
