For more detailed information visit: [origin and fate of polyploidy in cultivated Brassica napus](#). Evidence for genome triplication in the allotetraploid Brassica napus has been obtained by a variety of morphological and cytological methods. Nucleotide sequence analysis of the genes encoding cytochrome-b559 indicates that the B. napus parental genomes are homoeologous and that the chromosome pairs have undergone a single round of genome duplication in the Brassicaceae. Transmission from maternal to filial generations of most cytologically distinguishable chromosome rearrangements that have occurred since the B. napus polyploid was formed provide further evidence for the occurrence of a single genome doubling event in this species. The size of the B. napus genome, based on cytogenetic and restriction site frequency analyses, is estimated to be about 1,400 Mb, which is equivalent to the C genome of the B. oleracea complex.

What's New in the XML Sorter?

XML Sorter is a simple yet powerful tool that helps you sort elements inside an XML file. The program allows you to choose the type of XML file and category from which you want to sort. The program then presents you with a list of available options, the content of which you can modify as you wish. Once you are satisfied with the changes, you can start the sorting process. The program creates a new XML document with all the attributes and elements of the original one. It then sorts the attributes and elements based on your specifications. Once the sorting is complete, you can preview the changes in the sorted file in order to see them in real-time. After sorting, you can export your changes in other formats, such as HTML or CSV. Some advanced features are available at the end of the program.
